Akimov Theory of Unity (ToU)

A Minimal Entry Overview

Author: Ing. Alex Akimov
Year: 2026
DOI: https://doi.org/10.5281/zenodo.19198910

---

1. CORE QUESTION

What is a “perspective” in a complex system?

Rather than treating perspective (or consciousness) as an intrinsic property of a system, the Akimov Theory of Unity (ToU) defines it as an emergent structural and dynamical phenomenon.

2. CENTRAL HYPOTHESIS

A perspective emerges when the interaction between two internal components of a system stabilizes into a coherent configuration:

- world-model (M_w)
- self-model (M_s)

```
(M_w, M_s)  →  attractor  →  perspective
```

A perspective is formally defined as a stable attractor in the joint dynamics of (M_w, M_s).

3. KEY IDEA

“Consciousness is not a thing, but a mode of organization.”

4. FORMAL VIEW

```
(M_w, M_s)  →  attractor
```

5. RESEARCH POSITION

This work is formulated as a Lakatosian research programme, providing:

- a formal conceptual framework
- a core theoretical structure
- a basis for future empirical and computational testing

6. STATUS

Conceptual and formal research framework. Submission-ready academic material. Currently under submission to arXiv.

7. CITATION

Akimov, A. (2026). A Formal Framework for Perspectival Organization in Complex Systems. Zenodo. https://doi.org/10.5281/zenodo.19198910

8. AUTHORSHIP STATEMENT

All theoretical contributions are authored solely by Ing. Alex Akimov. AI systems were used exclusively as analytical tools for generating alternative formulations and potential objections. They did not contribute original theoretical content and do not hold authorship status.
